

How the NovelAire Comfort Wheel™ works

The revolutionary new technology of NovelAire's Comfort Wheel is specifically designed to maximize moisture removal and comfort in your home. The Comfort Wheel rotates slowly while simultaneously absorbing the moisture from your home. The moisture-laden wheel then rotates into the outdoor air stream where a gas flame heats the outdoor air so that it dries the wheel and discharges the unwanted excess moisture outdoors. This innovative process provides greater comfort and a healthier indoor environment for your home.

At NovelAire Comfort Products, we specialize in creating the great indoors™. To experience the great indoors in your home, call NovelAire Comfort Products today.

COMFORT DRY™ 400

advanced humidity control

Breakthrough humidity control technology with natural gas or propane.

NOVELAIRE Comfort PRODUCTS
creating the great indoors™

creating the great indoors™

Within your home, memories are made, traditions are born, and the stresses of the world seem to slip away. **Your home is your sanctuary** and you deserve to relax in complete comfort indoors, regardless of what Mother Nature is delivering outdoors. Excess moisture in your home can increase the spread of mold, dust mites and mildew that are detrimental to the comfort and health of your family. **NovelAire's ComfortDry™ 400 dehumidifier** is designed specifically to enhance your home's comfort and indoor health environment. The unit utilizes "state of the art" gas-fired desiccant technology to achieve the most complete air conditioning system available to the residential market. **NovelAire Comfort Products** is committed to creating the great indoors for you and your family.

gas comfort and economics

Clean, economical gas is now available to conditioned air in your home throughout the year. The ComfortDry 400 utilizes environmentally friendly natural or propane gas and was developed and tested in cooperation with the Gas Technology Institute.

choose your comfort level

Controlling your home's humidity independently is especially helpful in the Spring and Fall when humidity is frequently high, but the temperatures are too low to activate the air conditioning. In these cases, the ComfortDry 400 dehumidifier would take over on its own, controlling the humidity, without having to turn on the air conditioner.

Excess moisture causes mold to flourish. When this occurs there is an increased risk of health problems such as allergies, asthma, bronchitis, and other illnesses. Controlling the moisture is key to stopping indoor mold and other allergen growth and thus creating a cleaner, healthier home environment for your family. With NovelAire's ComfortDry 400, **you control the level of humidity and temperature in your home independently.** Maintaining the relative humidity at about 50% is best for controlling mold growth, dust mites, and allergens. Simply set the programmable humidistat to your desired comfort level, sit back, and breathe easy.
